#### Inheritance

Two parties are fighting over inheritance (say \$100)

#### Inheritance

► Two parties are fighting over inheritance (say \$100)

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

- Party A claims \$100
- Party B claims \$50

#### Inheritance

Two parties are fighting over inheritance (say \$100)

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- Party A claims \$100
- Party B claims \$50
- How should one split the \$100?

Two Methods:

Equal division

Two Methods:

- Equal division
  - Both parties get \$50

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Two Methods:

- Equal division
  - Both parties get \$50
  - All parties get the same amount

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Two Methods:

- Equal division
  - Both parties get \$50
  - All parties get the same amount

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Proportional Division

Two Methods:

- Equal division
  - Both parties get \$50
  - All parties get the same amount

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- Proportional Division
  - Party A gets \$67
  - ► Party *B* gets \$33

Two Methods:

- Equal division
  - Both parties get \$50
  - All parties get the same amount
- Proportional Division
  - Party A gets \$67
  - Party B gets \$33
  - Parties get the proportion of what they claimed to the sums of all claims

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

Two Methods:

- Equal division
  - Both parties get \$50
  - All parties get the same amount
- Proportional Division
  - Party A gets \$67
  - Party B gets \$33
  - Parties get the proportion of what they claimed to the sums of all claims

Resolution depends on social customs

This is an example of a **fair division** problem:

Want to split some goods *fairly* among some people

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

This is an example of a **fair division** problem:

► Want to split some goods *fairly* among some people

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Goods can be:

This is an example of a fair division problem:

- ► Want to split some goods *fairly* among some people
- Goods can be:
  - divisible: can split goods into any proportions (money)

This is an example of a fair division problem:

- Want to split some goods *fairly* among some people
- Goods can be:
  - divisible: can split goods into any proportions (money)
  - indivisible: cannot split goods into any proportions ({piano, car, dog})

This is an example of a fair division problem:

- Want to split some goods fairly among some people
- Goods can be:
  - divisible: can split goods into any proportions (money)
  - indivisible: cannot split goods into any proportions ({piano, car, dog})

Not all people have to value the same goods the same way

This is an example of a fair division problem:

- Want to split some goods fairly among some people
- Goods can be:
  - divisible: can split goods into any proportions (money)
  - indivisible: cannot split goods into any proportions ({piano, car, dog})
- Not all people have to value the same goods the same way

People may have different levels of entitlement

This is an example of a fair division problem:

- Want to split some goods fairly among some people
- Goods can be:

. . .

- divisible: can split goods into any proportions (money)
- indivisible: cannot split goods into any proportions ({piano, car, dog})
- Not all people have to value the same goods the same way
- People may have different levels of entitlement
- Can divide inheritance, chores, business profits, Berlin, cake,

#### • Let $u_i(X_j)$ be the value that person *i* assigns to *j*'s division

Let u<sub>i</sub>(X<sub>j</sub>) be the value that person i assigns to j's division
Fairness can be measured by:

Let u<sub>i</sub>(X<sub>j</sub>) be the value that person i assigns to j's division
 Fairness can be measured by:

• simple fair division:  $u_i(X_i) \ge \frac{1}{n}$ 

Let u<sub>i</sub>(X<sub>j</sub>) be the value that person i assigns to j's division
 Fairness can be measured by:

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- simple fair division:  $u_i(X_i) \ge \frac{1}{n}$
- envy-free:  $u_i(X_i) \ge u_i(X_j)$

Let u<sub>i</sub>(X<sub>j</sub>) be the value that person i assigns to j's division
 Fairness can be measured by:

- simple fair division:  $u_i(X_i) \ge \frac{1}{n}$
- envy-free:  $u_i(X_i) \ge u_i(X_j)$
- equitable:  $u_i(X_i) = u_j(X_j)$

- Let u<sub>i</sub>(X<sub>j</sub>) be the value that person i assigns to j's division
   Fairness can be measured by:
  - simple fair division:  $u_i(X_i) \ge \frac{1}{n}$
  - envy-free:  $u_i(X_i) \ge u_i(X_j)$
  - equitable:  $u_i(X_i) = u_j(X_j)$
  - Pareto optimal: no other division would make someone else better off without making someone else worse off

- Let  $u_i(X_j)$  be the value that person *i* assigns to *j*'s division
- Fairness can be measured by:
  - simple fair division:  $u_i(X_i) \ge \frac{1}{n}$
  - envy-free:  $u_i(X_i) \ge u_i(X_j)$
  - equitable:  $u_i(X_i) = u_j(X_j)$
  - Pareto optimal: no other division would make someone else better off without making someone else worse off

Problem:

- Let  $u_i(X_j)$  be the value that person *i* assigns to *j*'s division
- ► Fairness can be measured by:
  - simple fair division:  $u_i(X_i) \ge \frac{1}{n}$
  - envy-free:  $u_i(X_i) \ge u_i(X_j)$
  - equitable:  $u_i(X_i) = u_j(X_j)$
  - Pareto optimal: no other division would make someone else better off without making someone else worse off
    - Problem: Someone getting everything, and everyone else getting nothing, is Pareto optimal

A rule in the Talmud:

Man is married to three women

A rule in the Talmud:

- Man is married to three women
- Upon husband's death, each wife is to receive 100, 200, 300 (zuz)

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

A rule in the Talmud:

- Man is married to three women
- Upon husband's death, each wife is to receive 100, 200, 300 (zuz)

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Problem: estate is not worth 600

A rule in the Talmud:

- Man is married to three women
- Upon husband's death, each wife is to receive 100, 200, 300 (zuz)
